

Turn your expertise into AI skills

SBL AI-Native Professional

Build AI systems around your knowledge, your standards, and the way you work.

Personal AI engineers with experience at
Google, AMD and Microsoft

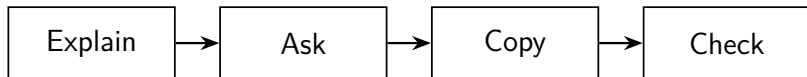

For professionals, managers and leaders.

No coding background required.

You ask AI. You still carry the work.

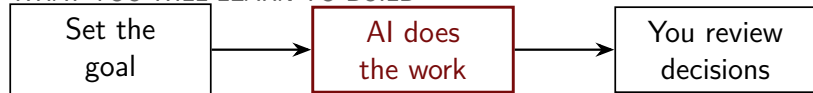

You may already use GPT to write, research and answer questions. You still carry the steps around it.

TODAY

Then explain it all again.

WHAT YOU WILL LEARN TO BUILD

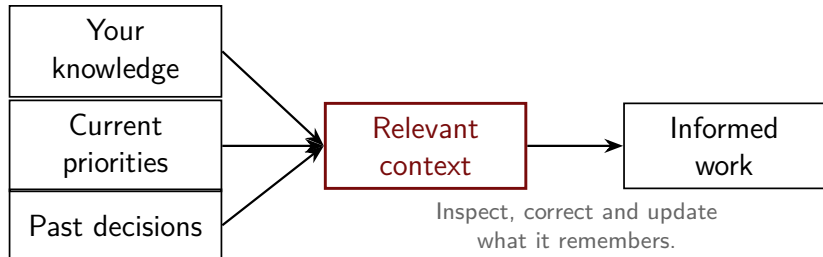

Build a system that carries more of the process.

Give AI context that carries forward

Your goals. Your projects. Your past decisions. Your preferences.

Organize the information AI needs and preserve useful context across sessions.

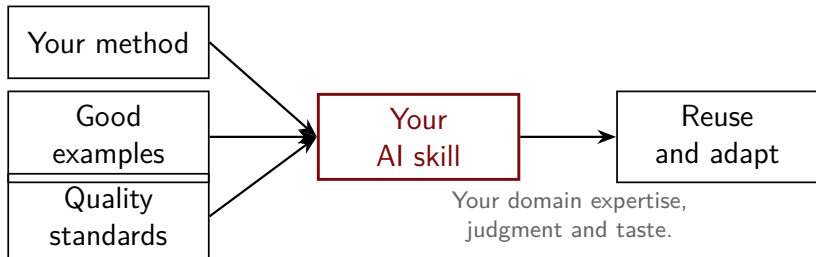

Context engineering and memory

Teach AI your way of working

The questions you ask. The examples you trust. The tone you prefer.

Turn your methods into reusable skill files that AI can follow.

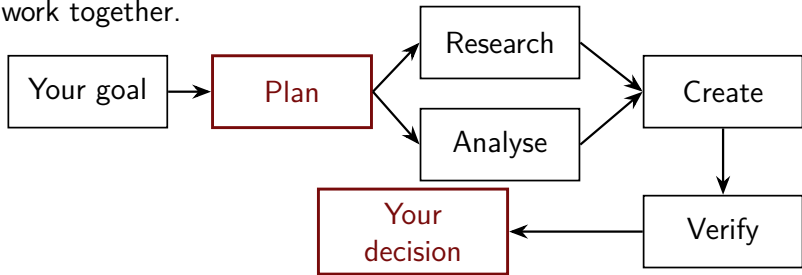

Reusable skills

Learn to orchestrate the whole process

Connect research, analysis, creation and checking into a working flow.

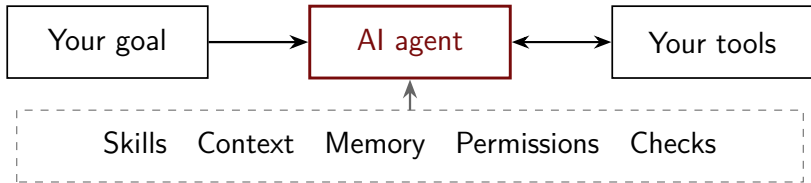

Learn when one agent is enough and when specialists should work together.

Agent orchestration: clear jobs, tools and handoffs.

Build an AI system that can act

Connect AI to approved documents, applications, browsers and tools.

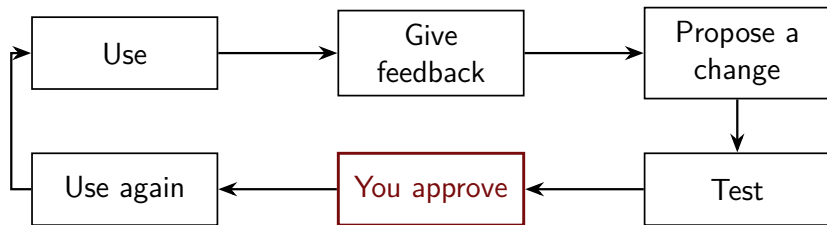

Harness engineering: building the environment that helps AI carry work through.

Tool use and harness engineering

Build AI that improves with your feedback

Turn corrections into proposed improvements to your AI skills.
Test changes before adopting them.

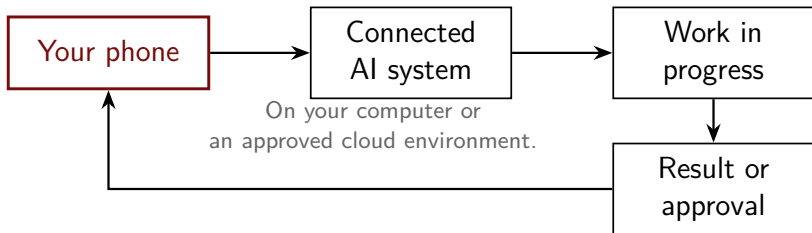

Refine how it works and how closely it follows your taste.

Self-improving skills, with tested and approved updates.

Direct your systems from your phone

Start a workflow. Check progress. Review a result. Approve the next step.

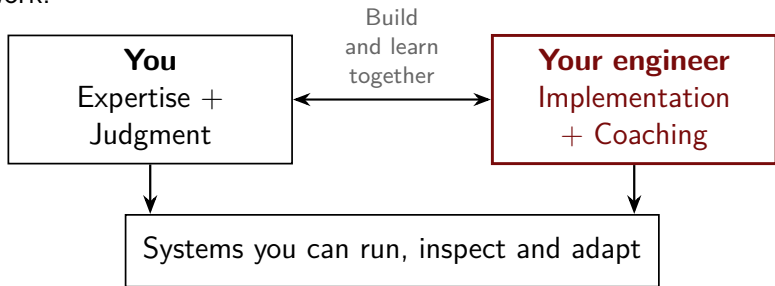

Work continues between check-ins.

Your judgment stays in the loop.

Available where your tools and connected setup support it.

Your personal AI engineer builds with you

Explore what is possible with someone who helps you make it work.

Engineers with experience at Google, AMD and Microsoft.

One-to-one implementation and coaching. No coding prerequisite.

Become more ambitious with AI

Pursue bigger outcomes. Investigate more deeply. Combine capabilities across fields.

- 01 A reusable library of your AI skills.
- 02 Connected workflows built around your work.
- 03 Feedback loops for testing improvements.
- 04 Systems you can direct, inspect and adapt.

Build capabilities that travel with you.
